The present sequence is useful for producing transgenic plants having altered levels of sphingolipid desaturase which in turn would alter the fatty acid composition. The enzyme is also useful for producing polyclonal or monoclonal antibodies. The polynucleotide is useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                        Wheat; sphingolipid desaturase; membrane-bound transgenic plant; fatty acid.

The present sequence is useful for producing transgenic plants having altered levels of sphingolipid desaturase which in turn would alter the fatty acid composition. The enzyme is also useful for producing polyclonal or monoclonal antibodies. The polynucleotide is useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polynucleotide encoding delta-6 desaturase enzyme useful for procuransgenic plants and for producing antibodies specific to which useful for screening cDNA expression libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

The present sequence is useful for producing transgenic plants having altered levels of sphingolipid desaturase which in turn would alter the fatty acid composition. The enzyme is also useful for producing polyclonal or monoclonal antibodies. The polynucleotide is useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
This invention describes a novel sphingolipid desaturase that selectivel introduces a double bond into the sphingolipid separation or sphingolipid and capnoids. A DNA sequence encoding the sphingolipid desaturase, or a vector containing the DNA sequence, can be used to produce transgenic plants, especially crop plants, with an increased or decreased delta-8-unsaturated long-chain base content or an altered delta-8-unsaturated long-chain base chair, especially to compensate for a delta-8-unsaturated long-chain base in increase tolerance or resistance to soil salinity, ion stress or toxicity, drought, wet conditions, cold or frost and/or phytopathogenic microorganisms, or to alter size growth and flowering time. Cells, transgenic organisms or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      plants containing the DNA sequence can be used to produce sphingolipids and capnoids with unsaturated sphingobases. The sphingolipids or capnoid can be used in cosmetics, pharmaceuticals and foods and as chemical raw materials. This sequence represents the Brassica napus sphingolipid desaturase sld1 protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAY51348 standard;

Cells, transgenic organisms or plants containing the DNA sequence can be used to produce sphingolipids and capnoids with unsaturated sphingobases. The sphingolipids or capnoids can be used in cosmetics, pharmaceuticals and foods and as chemical raw materials. This sequence represents a sphingolipid desaturase protein described in the method of the invention.

Expression of the desaturase in transgenic plants, esp. sunflower, soybean, maize, tobacco, peanut, carrot or oilseed rape, results in increased GIA produ. Alteration of the plant membrane lipids as a result of expression of the desaturase may also result in increased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                linoleic acid to gamma-linolenic acid (GLA). Its sequence was deduced from that of the delta-6-desaturase gene (AAT30395) isolated from a borage membrane-bound polysomal library. The sequence is distinct from that of Synechocystis delta-6-desaturase (AAT98456).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       resistance to chilling.

Delta-6 desaturase cDNA (see ANX4917) was isolated from a borage membrane-bound polysomal cDNA library using a partial clone, obtained from an EST database search, as probe. The borage delta-6 desaturase nucleic acid can be operably linked to the seed-specific 5' regulatory region (see ANX2916) of the Arabidopsis thaliana cleosin AtS21 gene in claimed expression cassettes of the invention. Transgenic plants, e.g. sunflower, soybean, maize, tobacco, cotton, peanut, oilseed rape or Arabidopsis are obtained that show increased levels of GLA or octadecatetraeonic acid. The levels of desirable fatty acids in oilseed crops can be manipulated to provide seed oils of use in human health and industrial applications.

New sphingolipid desaturase that selectively introduces double bond TULO sphingolipids and capnoids

Disclosure; Page 33-34; 62pp; German

This invention describes a novel sphingolipid desaturase that selectively controduces a double bond into the sphingobase of the ceramide residue of sphingolipids and capnoids. A DNA sequence encoding the sphingolipid desaturase, or a vector containing the DNA sequence, can be used to produce transgenic plants, especially crop plants, with an increased or decreased delta-8-unsaturated long-chain base content or an altered compensate for a delta-8-unsaturated long-chain base content or an altered compensate for a delta-8-unsaturated long-chain base deficiency, to exclude production of delta-8-unsaturated bases, to increase tolerance or resistance to soil salinity, ion stress or toxicity, drought, wet conditions, cold or frost and/or phytopathogenic microorganisms, or to calter size growth and flowering time. Cells, transgenic organisms, or complete some soil swith unsaturated sphingobases. The sphingolipids or capnoids can be used in cosmetics, pharmaceuticals and foods and as chemical raw materials. This sequence represents a desaturase protein, HADES, isolated from Helianthus annuus (sunflower) which is used in the method of the invention.

Sequence 448 AA;

                                                                                                                                                   The invention describes an isolated nucleic acid encoding an evening primrose Delta6-desaturase. The nucleic acid and a vector expressing the nucleic acid are useful for producing a plant such as sunflower, soybean, maize, tobacco, peanut, carrot or oil seed rape plant, with increased gamma linolenic acid (GLA) content, and also for inducing or increasing production of GLA in a bacteria or plant deficient, lacking in or producing low levels of GLA. The nucleic acid is also useful for inducing chilling tolerance in plants. This is the amino acid sequence of the corage delta6 desaturase involved in the production of gamma linoleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acid encoding evening primrose delta6-desaturase which converts linoleic acid to gamma linolenic acid useful for producing gamma linolenic acid in transgenic plant or bacteria -
                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                        Example 9; Column 31-34; 53pp; English.

The nucleic acid, a vector comprising the nucleic acid or a nucleic acid encoding delta-12-desaturase, is useful for producing a plant (such as sunflower, soybean, malze, tobacco, peanut, carrot or oil seed rape plant) with increased gamma-linolenic acid (GLA) content by transforming a plant cell with the nucleic acid or vector and regenerating a plant with increased GLA content from the plant cell, for inducing or increasing production of GLA in an organism lacking in or producing low levels of GLA and for inducing production of octadecatetraenoic acid in at least one of a plant deficient or lacking in or producing low levels of octadecatetraenoic acid, a bacterium which produces alpha-linolenic acid or a bacterium which exhibits a delta-15-desaturase activity on a GLA substrate. This sequence represents

                                                                                                                                                                                                 desaturase, or a vector containing the DNA sequence, can be used to produce transgenic plants, especially crop plants, with an increased or decreased delta-8-unsaturated long-chain base content or an altered delta-8-unsaturated long-chain base catefolic especially to compensate for a delta-8-unsaturated long-chain base deficiency, to exclude production of delta-8-unsaturated bases, to increase tolerance or resistance to soil salinity, ion stress or toxicity, drought, wet conditions, cold or frost and/or phytopathogenic microorganisms, or to alter size growth and flowering time. Cells, transgenic organisms or plants containing the DNA sequence can be used to produce sphingolipids and capnoids with unsaturated sphingobases. The sphingolipids or capnoids can be used in cosmetics, pharmaceuticals and foods and as chemical raw materials. This sequence represents the Arabidopsis thaliana sphingolipid desaturase eld1 protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel sphingolipid desaturase that selectively introduces a double bond into the sphingobase of the ceramide residue of sphingolipids and capnoides. A DNA sequence encoding the sphingolipid desaturase, or a vector containing the DNA sequence, can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sphingolipid desaturase; sld1; sphingobase; ceramide; capnoid; transgenic plant; crop plant; delta-8-unsaturated long-chain base; tolerance; resistance; soll salinity; ion stress; toxicity; drought; cold; frost; phytopathogenic microorganism; flowering time; cosmetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New sphingolipid desaturase that selectively introduces double into sphingolipids and capnoids -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A. thaliana sld1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY51334;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-JUN-1998;

Inolecyl-CoA desaturase (EC 1.14.19.3) [validated] - human
N;Alternate names: Delta6 fatty acid desaturase; protein DKFZp586C201.1
C;Species: Homo sapiens (man)
C;Date: 13-Aug-1999 #sequence revision 13-Aug-1999 #text_change 03-Jun-2002
C;Accession: T13155; T08765
R;Cho, H.P.; Nakamura, M.T.; Clarke, S.D.
J. Biol. Chem. 274, 471-477, 1999
A;Title: Cloning, expression, and nutritional regulation of the mammalian Delta-6 di
A;Reference number: Z17612; MUID:99085046; PMID:9867867
A;Accession: T13155
A;Accession: T13155
A;Molecule type: mRNA
A;Residues: 1-444 <CHO>
